Indexed in Current Contents

1. The first part of the paper discusses the importance of the study of the history of the United States. It is argued that a knowledge of the past is essential for a full understanding of the present and for the development of a sound policy for the future. The author points out that the study of history is not only a means of satisfying our curiosity about the past, but also a way of learning from the mistakes of our ancestors and of avoiding them in the future.

2. The second part of the paper is devoted to a discussion of the various methods which have been employed by historians in the study of the past. It is shown that the methods of the historians have changed from time to time, and that the methods of the present are the result of a long and complex process of evolution. The author points out that the methods of the present are more scientific and more accurate than those of the past, and that they have enabled historians to discover many new facts about the past.

3. The third part of the paper is devoted to a discussion of the various schools of thought which have developed in the study of the history of the United States. It is shown that the various schools of thought have developed as a result of the different views of the past which have been held by different groups of people. The author points out that the various schools of thought have each contributed to our knowledge of the past, and that they have each played a part in the development of the study of the history of the United States.

4. The fourth part of the paper is devoted to a discussion of the various problems which have arisen in the study of the history of the United States. It is shown that the various problems have arisen as a result of the different views of the past which have been held by different groups of people. The author points out that the various problems have each contributed to our knowledge of the past, and that they have each played a part in the development of the study of the history of the United States.

5. The fifth part of the paper is devoted to a discussion of the various conclusions which have been reached in the study of the history of the United States. It is shown that the various conclusions have been reached as a result of the different views of the past which have been held by different groups of people. The author points out that the various conclusions have each contributed to our knowledge of the past, and that they have each played a part in the development of the study of the history of the United States.
